

## **Hassan Allam Holding embarks on the completion of seven new infrastructure water and wastewater treatment projects**

- We are working to provide clean water to more than 1.5 million people in the most vulnerable villages: Mohamed El Dahshoury
- We have vast capabilities to implement integrated projects from design through civil and electromechanical works to implementation and operation: Hazem Kamal

**Cairo - 24<sup>th</sup> of January 2021**

Hassan Allam Holding (HAH), a leading construction and engineering group headquartered in Cairo, Egypt, serving regional and global clients in the Middle East and North Africa, announced that its subsidiaries, Hassan Allam Construction and the International Environmental Technologies Company (Intech), have obtained contracts for seven new infrastructure and water and wastewater treatment projects. The new projects are located in several villages across Egypt, including Tahta in Sohag, Port Fouad in Port Said, Jazra in Giza, Damanhour in Beheira, Abu Kouraks in Minya, Lydia in Beheira, and Masged Mousa in Giza.

Mohamed El Dahshoury, CEO of Hassan Allam Construction, commented, "Our latest projects are part of the expansion framework that we are currently pursuing and are inspired by our keenness to actively partake in various national projects that are in line with Egypt's 2030 vision with the ultimate goal of providing a better life for all Egyptians. The new projects would also play a vital role in preserving and developing water resources and developing the infrastructure of seven of Egypt's most vulnerable villages. The seven new projects will collectively have a total output capacity of 170,000 m<sup>3</sup>/day to serve more than one and a half million people. The group is also on track to deliver the water treatment plant in 6th of October City with a capacity of 400,000 m<sup>3</sup>/day and the wastewater treatment plant in the New Administrative Capital with a capacity of 250,000 m<sup>3</sup>/day."

"Hassan Allam Construction has also signed an agreement with the Industrial Development Authority to establish the first phase of the infrastructure networks for the wastewater treatment plant in West Tahta in Sohag Governorate. This project is expected to be completed within 30 months. We will build all the infrastructure, from sewage networks and the pumping station to the sewage treatment plant, to provide irrigation water. We will also build a purified water storage tank, a water pumping station, and a treated water storage tank in the industrial zone," he added.

Hazem Kamal Mostafa, Chairman of the International Environmental Technologies Company (Intech), one of the Hassan Allam Holding subsidiaries, said, "Our local and international companies, equipped by domestic factories, give us a unique capability of taking on integrated projects from scratch. We design, manufacture, supply, install infrastructure equipment, and self-execute all civil and electromechanical works, then take the helm of operation and maintenance. This allows us to offer competitive performance and achieve the highest efficiency standards in project management while shortening implementation periods. It also allows our customers to easily track progress and standardize responsibility in implementation, which is one of the most important features that help the success of executing projects that serve broad sectors of society."
